	d to see a cardiologist during this age is based on the child's health history and examination. Children with
cardiac l	lesions may need to be monitored even after repair for remaining lesions and development of pulmonary nsion (high pressure in blood vessels of the lungs).
docume referred	should be checked every 6 months, with audiogram and tympanometry tests until normal hearing is nted by testing of both ears separately (usually by 4-6 years of age). Children with hearing loss should be to an otolaryngologist (ear, nose, and throat doctor or ENT). Higher risks of hearing problems can go with ear fluid and ear infections. Treatment of middle ear fluid often includes the use of ear tubes.
eye doct ducts mi	nould be checked at each visit to the doctor and with yearly checkups by a pediatric ophthalmologist (special tor) or a general ophthalmologist who is good with children with disabilities. Crossing eyes or blocked tear ight be reasons for quicker action. Early use of eye patches, glasses, or both may help to fix eye crossing wering the need for surgery and the risk of vision loss.
Thyroid The thyr with Dow syndrom	roid gland is usually normal in babies with Down syndrome. It can stop working normally for half of people wn syndrome by adulthood. The symptoms of low thyroid can be hard to notice in people with Down ne, so a blood test (TSH) is needed every year, or sooner if symptoms change. When there is a problem, nt is safe and can often be started by your primary doctor.
☐ <u>Blood te</u>	
	r low iron or anemia (hemoglobin and other tests if needed) should be done every year.
Discuss to commor problem changes your chill	toilet patterns at each visit, especially any ongoing problems with loose stools or constipation. These are in children with Down syndrome. Some children with Down syndrome have celiac disease, which is a with tolerating some grains, including wheat. Testing can help to identify that condition, and may lead to in diet. Celiac disease can affect growth, stooling patterns, and behavior. Let your child's doctor know if ld is having: ery loose stools ard to treat constipation (hard or painful stools)

• Belly pain or stomach swelling

• New or challenging behavior problems

Neck instability	,
------------------	---

Bones in the neck or spine can be unstable in some people with Down syndrome. There are almost always visible signs when there are problems. Daily physical activity is important to your child and should not be limited by unneeded worries. X-rays are not needed unless there is pain or changes in the use of hands, walking, or bowel or bladder function. If x-rays are done, and the results are abnormal, your child may be referred to a spine or neck specialist. Special neck positioning may be needed for some medical procedures. Let your child's doctor know if your child is having:

- Stiff or sore neck
- Change in stool or urination pattern
- Change in walking
- Change in use of arms or legs
- Numbness (loss of normal feeling) or tingling in arms or legs
- Head tilt

」 Sleep	issues
---------	--------

Obstructive sleep apnea is a common problem for people with Down syndrome, especially those with low muscle tone. Some symptoms are obvious (snoring, restless waking at night, daytime sleepiness), but it can be hard to tell just by watching. AAP guidelines recommend that every child with Down syndrome have a sleep study by the age of 4 years. (That testing may be hard to find in some parts of the country.) Treatment can include special breathing equipment or surgery.

☐ Skin

Discuss with your child's doctor if your child has very dry skin or other skin problems.

□ Brain and nervous system

Discuss with your child's doctor concerns about neurologic problems, such as seizures.

☐ Dental

Delayed and missing teeth are common. Teeth often come in unusual order.

☐ New treatments

Talk to your doctor about any new treatments or medications you may consider.

☐ Recurrence risk counseling

Talk to your doctor about future pregnancy planning and chances of recurrence of Down syndrome and where prenatal diagnosis is available.

Developmental services (early intervention)

Review your child's development with your doctor. Referral to local early intervention services and other options for therapy may be needed. Speech progress can be very delayed in children with Down syndrome, but after some delays, most will learn to talk well. Until speech is easier for your child, he or she might need help finding other ways to communicate, such as using sign language, pictures, reading, or using electronic communication tools. Behavior problems are often linked to problems with communication, but may reflect other issues, including ADHD or autism. Language delays or hidden abuse are more common than autism but may be misdiagnosed. Talk with your doctor about how to explain social safety and "good and bad touch" as your child grows older.
